Trans. of Italian patent 511,194, cl. XVIII, appl.  
27 Jan 54, granted 25 Jan 55, printed Mar 59.

The machine consists of a supporting structure carrying a plurality of rotary elements mounted on parallel shafts perpendicular to the longitudinal section plane of the structure. The elements are capable of controlling the different groups of the machine and are driven by flexible transmission means. The structure supporting the kinematic transmission is contained in an outer protective casing.
